## Manufacture of Fasteners is Being Created in the Kaluga Region

On May 30 Anatoly Artamonov, the Governor of the Kaluga region, visited the construction site of the erecting plant in the industrial park Vorsino at Borovsk District. The launch of a new facility becomes possible due to the investors. The new production is created by "PO "Metallist", LLC, a member of the company Grand Line. The volume of investment in the project is 1 billion rubles. The number of planned jobs will be 150-200 people. At present, the construction of internal engineering networks is being completed, and preparations are under way, the improvement of the territory is underway. The commissioning of the new plant is scheduled for the third quarter of 2018. The expected duration of the project as a whole is until the fourth quarter of 2019.

## Specialists of SRO "GLAVKUZBUS-STROY" were Trained in the Installation of Anchors

On May 15-18 in Kemerovo, two groups of specialists of SRO "GlavKuzbasStroy" Association were trained in the installation of anchors. The organizers were Association SRO "GLAVKUZBASSTROY", Union of manufacturers and suppliers of fastening systems (Moscow), "Construction" JSC (Moscow).

36 representatives of the organizations - members of the Association took part in the classes. The systematic presentation of the material, fixed by practice, allowed the students to pass the testing, conducted at the end of the seminar, successfully. Based on the results of the training, the participants received the certificates of experts for the installation of anchors. The participants of the seminars noted the high professional level of the organization and conduction of training, the systematic and clear presentation of the theoretical material and practical part.

## New Board of Directors in MMK-METIZ

The annual general meeting of shareholders was held at MMK-METIZ, OJSC. The agenda of the meeting included several issues: approval of the annual report, annual financial statements, the distribution of profits, election of members of the Board of Directors, election of members of the Audit Commission and approval of the auditor. Following the voting results of the shareholders, a new Board of Directors of MMK-METIZ was elected.

## The Plant of High-strength Fasteners "Bervel" will be Supported by the State

The fastener plant "Bervel" will be supported by the state. The decision on this was taken at a meeting of the Investment Council of the Ryazan region, which took place on June 22.

At present, work is underway to create the second stage of the enterprise. With the receipt of state support for the amount of 414.4 million rubles, 300 additional jobs are expected to open, as well as a significant expansion of the range of products. The production of high-strength fasteners will be 38,450 tons per year.

## MMK-METIZ Launches New Equipment

Within the limits of a new stage of self-cutting screws production development, MMK-METIZ has bought cold-upsetting, thread-rolling automatic machines, machine tools for drill forming and packing lines of Taiwanese manufacturers.

In the 3rd quarter of 2018, the company will launch a line of thermo chemical treatment and a phosphatization line. This will allow to increase the volume of tapping screws production; thus it will be possible to expand a range of goods by development production of screws for gypsum board fixture of the increased length (to 152 mm), tapping screws for a PVC profile (including those with a tip "drill"), hemispherical head pressure pad tapping screws (including those with a tip "drill"), universal wood screws and nails-screws for plastic dowel.

All these projects are a part of the investment program of Magnitogorsk Iron & Steel Works.

Also in 2017 and in the beginning of the current year, "MMK-METIZ" launched some complexes of the new equipment that essentially allow to raise a range of goods and improve their quality. Among them:

- The Taiwan automatic machines for production of fasteners under standards DIN M6-M12 which is used in mechanical engineering and in the building industry. On the given equipment the company manufactures new kinds of fasteners, including tensilock screws, round-head bolts and carriage bolts, allen screws, collar nuts. Nowadays, the basic volume of tapping screws, bolts and nuts under standards DIN is imported from the countries of South East Asia.

- The production of large sized fixture including the German quench unit for production of high-strength fixture M6-M30 and a local line for galvanization of fixture M12-M36. This equipment has allowed to provide a high quality of thermal treatment of fasteners and to expand a range of goods by the development of production of the zinced fixture of large diameters. ■
