

Many industries around the world have waved farewell to the year 2020 after a year-long depression. As a key factor that is able to impact on the supply and demand of the global relevant manufacturing, the automotive industry in many countries has also officially stepped into the year of 2021, accompanied by a series of news about production shutdown, lack of materials, and surging manufacturing costs. On the other hand, as the automotive industry has been gradually turning its focus from traditional fuel and hybrid powered vehicles to pure electric vehicles (EV) in recent 2 years, several car manufacturers have also begun to dedicate themselves to the R&D of EV, which means that the design of vehicle structure may appear a revolution in the next couple of years and is very likely to cause drastic impact on the supply chain of traditional automotive fasteners and components. However, as the technology of pure EV is still not fullyfledged, the supporting packages are not completely ready yet, and the public is still trying to adapt to the existence of EV, the fuel-powered vehicles won't be completely replaced in the short term (at least in the next five years). To view objectively, although the production and sales did appear a short-term decline, with some positive developments such as market reopening, the lack of car chips being solved, and quick recovery of customer demand, there will be definitely another wave of prosperity for the traditional car manufacturers to enjoy.

This article will analyze the global car production and sales in 2020 as well as the detailed data for passenger cars, commercial vehicles, heavy trucks, and buses & coaches, for readers to get a clearer picture of the latest change in car production and change in certain countries.

Production (All Vehicles)

According to the latest data released by OICA (*Table 1*), the global total car production in 2020 reached 77,621,582 units, a significant shrinkage of 15.8% from 92,175,805 units in 2019. To view by continent, in 2020, Europe (incl. the UK) produced nearly 17 million units, down 21.6% from 2019; America produced nearly 16 million units, down 22.1% from 2019; Asia produced more than 44 million units, down 10.2% from 2019; CIS/Turkey produced over 3 million units, down 11.7% from 2019; Africa produced 0.7 million units, down 35.3% from 2019.

The production in each of the five continents all appeared a decline. Africa shows the most significant decline margin of -35.3%, while Asia shows the least significant decline margin of -10.2%. Asia, Europe and America remained the most important car manufacturing heartlands in the world, and over 50% of the global production was in Asia (with China alone representing over 25 million units). In terms of these 3 major manufacturing heartlands, the top 3 manufacturing countries in Europe were Germany, Spain, and France; the top 3 manufacturing countries of America were USA, Mexico, and Brazil; the top 3 manufacturing countries of Asia were China, Japan, S. Korea. If to view by country, only Uzbekistan, Kazakhstan, Belarus, Iran and Egypt remained growth, while the others all appeared a decline.

Production (Passenger Cars) (See Table 2)

The global passenger cars production in 2020 reached 55,834,456 units, down 16.9% from 2019. Passenger cars represented 72% of the global vehicles production and the production of passenger cars was highly concentrated on Europe and Asia (more than 90% of the global passenger cars production). What's worth mentioning is that America was also one of the major three car manufacturing heartlands in the world, but the passenger cars production represented merely 30% of its total production (which is a little bit low). On the other hand, the top 3 passenger cars manufacturing countries of each continent are basically similar to the top 3 vehicles manufacturing countries.

Production (Light Commercial Vehicles) (See Table 3)

The global light commercial vehicles production in 2020 reached around 17.2 million units, down 16.1% from 2019. Light commercial vehicles represented around 22% of the global vehicles production and nearly 87% of the light commercial vehicles production were in America and Asia. America, in particular, represented over 10 million units (mainly in USA. Mexico, and Canada). More than 65% of the car production in America were light commercial vehicles, quite different from Europe where over 86% of the car production were passenger cars. In terms of this vehicle type, top 3 manufacturing countries in Europe were Spain, France, and Italy; top 3 manufacturing countries in America were USA, Mexico, and Canada; top 3 manufacturing countries in Asia were China, Thailand, and Japan.

Production (Heavy Trucks) (See Table 4)

The global heavy trucks production in 2020 reached 4.3 million units, up around 5.0% from the same period of 2019. Heavy trucks was also the only one vehicle type showing production growth. Heavy trucks represented around 5.6% of the global vehicles production. To view by continent, the production in the world's largest two manufacturing regions (Europe and America) appeared a respective decline of -21.5% (landing at 0.225 million units) and -30.0% (landing at 0.473 million units). The production in Asia appeared a 15.2% rise against the tides and reached around 3.64 million units (China alone reached a 34.2% growth from 2019). Asia not only played an essential role in pushing the global heavy trucks production ahead, but also was the world's largest heavy trucks manufacturing country (representing over 83% of the global production). Major manufacturing countries of this vehicle type were: China, Japan, USA, Mexico, and India.

Production (Buses & Coaches) (See Table 5)

The global buses & coaches production in 2020 reached around 0.22 million units, a significant decline of -36.8% from 2019. The production of this vehicle type represented only less than 0.3% of the global vehicle production and more than 70% of the buses & coaches production was in Asia. To view by continent, Europe, CIS and Turkey all kept their decline within -10%, but America, Asia, and Africa appeared a decline of -37.3%, -41.3%, and -25.4%, respectively. Major manufacturing countries of this vehicle type were China, India, Brazil, Russia, S. Korea, Turkey, Poland, and Czech Rep.

Pie charts below demonstrate the global production of certain vehicle types in certain continents in 2020 in percentage terms:

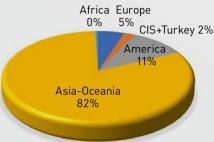

Production of All Vehicles

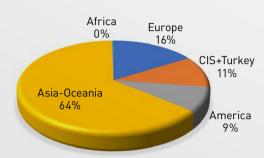

Production of Heavy Trucks

Production of Buses & Coaches

Sales (All Vehicles)

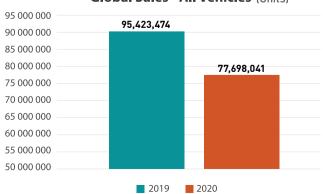

The global vehicles sales in 2020 reached 77,698,041 units, down 14.1% from 2019's 90,423,474 units, a decline margin similar to the drop in production in the same year (see Table 6). To view by continent, in 2020, sales in Europe (incl. the UK) were around 16.7 million units, down 20.2% from 2019; sales in America were nearly 20 million units, down 19.6% from 2019; sales in Asia exceeded 40 million units, down 7.8% from 2019; sales in Russia/Turkey/Other Europe were around 2.6 million units, up 5.1% from 2019; sales in Africa were around 0.9 million units, down 22.6% from 2019.

Except for Russia/Turkey/Other Europe, other continents all appeared a decline in sales and the most significant sales decline was in Africa (reaching -22.6%). Most sales were in Asia, America, and Europe. Asia alone represented more than 50% of the global sales. In terms of these three major sales hotspots, countries with the top 3 sales in Europe were Germany, France, and the UK; countries with the top 3 sales in America were USA, Brazil, and Canada; countries with the top 3 sales in Asia were China, Japan, and India. Compared to 2019, Almost all countries reported a decline in car sales except for a few countries which even reported higher sales records (such as Turkey, Puerto Rico, S. Korea, Taiwan, Kazakhstan, and Egypt). Turkey was the one among these countries that reported the highest growth rate of 61.8%.

Global Sales - All Vehicles (Units)

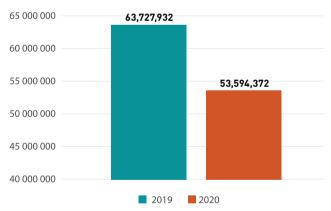

Sales (Passenger Cars) (See Table 7)

The global passenger cars sales in 2020 reached 53,594,372 units, down 15.9% from 2019. Passenger cars represented around nearly 70% of the global vehicles sales and sales of this vehicle type were mainly in Asia, Europe and America (more than 98% of the global passenger cars sales). What's worth mentioning is that America was also one of the top 3 sales hotspots in the world, but its passenger cars sales only represented around 34% of its total car sales. In addition, countries with the top 3 passenger cars sales in each continent were almost the same as those with the top 3 cars sales.

Global Sales - Passenger Cars (Units)

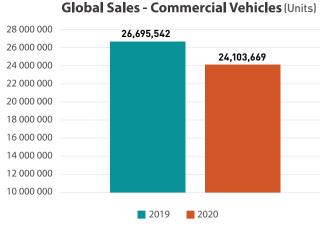

Sales (Commercial Vehicles) (See Table 8)

The global commercial vehicles sales in 2020 were around 24 million units, down 9.7% from 2019. Commercial vehicles represented around 30% of the global sales and nearly 88% of the commercial vehicles sales were in America and Asia. America alone represented more than 10 million units (mainly in USA, Canada, and Mexico). Over 66% of the vehicles sold in America were commercial vehicles, while more than 85% of the vehicles sold in Europe were passenger cars. In terms of this vehicle type, countries with the top 3 sales in Europe were France, Germany, and the UK; countries with the top 3 sales in America were USA, Canada, and Brazil; countries with the top 3 sales in Asia were China, Japan, and India.

------	---	---	---

In 2020 we saw that the production and sales in various markets around the world roughly appeared a decline of -15-30%, but both still remained above the level of nearly 80 million units, which reveals that although the global

automotive market was severely impacted, a certain level of capacity and demand were still there. However, it is still difficult for the global market to recover to the production and sales level in 2019 in the short term, as many external market factors (such as the progress of vaccination, when the borders will reopen, supply chain change, and customers' demands) may continue to cause some impact on the market. Taking sales data into account to forecast the future possible automotive market momentum, we could see that sales in major markets like China, Japan, India, S. Korea, USA, Canada, Mexico, Brazil, and W. Europe continued to be strong, but also see that the potential Turkish market also appeared a marveling growth margin in sales. However, as the global car production lines are still facing problems like insufficient materials and chips supply, governments of certain countries should accelerate their steps to figure out solutions and help manufacturers weather these challenges, otherwise, not only car manufacturers will be impacted seriously, but also other relevant industries in close collaboration with car manufacturers will be mired in difficulties, too.
