

Punches & Dies by

FRATOM FASTECH

Market-Overwhelming Superior Technology

by Gang Hao Chang,
Vice Editor-in-Chief of Fastener World

With more than 25 years of knowledge and background in punch & die manufacturing, FRATOM FASTECH based in Kaohsiung (Taiwan) looks globally and specializes in production and export of high-precision metal cold/hot forming punches and dies. For years, it has been one of the first choices of global fastener manufacturers in pursuit of high product quality and manufacturing efficiency when looking for comprehensive punch & die solution.

Its main products include: hot forming tools, punches and sleeves, dies, machinery accessories (transport fingers & grippers, feed rollers, other spare parts), Go/No Go gauges, concentricity gauges, head thickness measuring equipment and KEMNO cold forming lubricants. Adhering to the principles of improving excellent quality, fast shipment and providing competitive prices, as well as the desire to become the most trusted partner of its customers, FRATOM has established long-term partnerships with a number of int'l fastener manufacturers and tooling agents to jointly create high-quality professional production lines to serve customers' needs for various tooling and molds.

Multiple Punches to be Showcased at IFE 2022

In addition to being one of the world's most important fastener demand markets, the U.S. is also a hotspot for many manufacturers with advanced fastener manufacturing technology. At IFE this year, FRATOM will showcase its latest products, such as (round pins/hex/six-lobe/12-point) carbide punches, recess punches, sleeves, transport fingers & grippers, machinery accessories, tooling dies, die boxes and inserts to meet the huge demand for tooling and peripherals of fastener manufacturers.

"Our tungsten carbide punches and mirror polishing technology is excellent, and the surface roughness can even reach the level of Ra0.01 (generally, other industry peers can only achieve Ra0.1). At present, most of our products are directly sold to the European and American markets and are adopted by the majority of automobile and motorcycle, aerospace and medical fastener manufacturers. Our major clients in Europe are mostly from Italy and Germany, and the U.S. market even accounts for 20% of our sales. We hope to expand our presence in the U.S. market by participating in IFE this year and further develop the potential fastener manufacturing hot zone," according to FRATOM.

Being always honest in collaboration with customers and having been certified to ISO 9001 and ISO 14001 certification, FRATOM only uses materials with stable quality and introduces a complete range of quality control equipment to strictly control the quality and dimension of each product. On the other hand, faster quotation time, relatively quicker delivery, customized services and the ability to assist customers in solving problems are the biggest competitive advantages of FRATOM.

"This is our first participation in IFE. We hope that through this exhibition opportunity, we can establish more interaction with local customers in the U.S. and understand customer needs. We look forward to seeing you all at the show," said FRATOM.
